KÜNSTLICHE INTELLIGENZ FÜR MEDIZINISCHE DIAGNOSTIK

Next-generation order entry

Intelligent solutions for labs and referring physicians

medicalvalues Order Intelligence provides AI-supported order entry with a modern results portal. Support your referring physicians in reaching a diagnosis with intelligent test suggestions and modern ordering and add-on requesting of (specialty) parameters.

You and your referring physicians benefit from state-of-the-art technology

Discover our next-generation order entry, which makes work easier and increases efficiency for you and your referring physicians. Our software offers a wide range of functions tailored specifically to the needs of modern laboratories and practices:

- ✓ **Intelligent order validation:** Benefit from the integration of KBV billing rules and your own SOPs. Our software ensures that all orders are validated automatically, minimizing errors and simplifying billing.
- ✓ **Pre-analytical guidance:** Your referring physicians receive detailed information on the required specimen materials along with practical pre-analytical guidance. This ensures that all samples are processed correctly and efficiently.
- ✓ **Specialty laboratory:** Use one single platform for cross-disciplinary order creation and results review. Our software presents all laboratory disciplines clearly in one system, considerably improving collaboration and transparency.
- ✓ **Real-time order status:** Your referring physicians can track the current processing step and the documented order history at any time.
- ✓ **Patient-specific test recommendations:** Our software provides tailored test recommendations and alerts, for example on duplicate testing or follow-up examinations. Optimize your diagnostics and offer your referring physicians the best possible service.
- ✓ **Individual profiles and favorites:** Quick selection of frequently used tests and a customizable favorites view enable your referring physicians to work efficiently and conveniently.

More time for what matters

Relief through automation and simplification of operational processes.

Differentiation through diagnostic excellence and support

Intelligent test suggestions and ordering guidance support the requesting process.

Error-free orders

Validation and digital transmission of order data help prevent errors.

Access anywhere, anytime

Orders can be created and edited from anywhere, on any device.

Continuous development

Monthly software updates ensure that your system and the integrated rule sets are always up to date.

Modular system

The user interface can be customized individually and single functions integrated into existing systems.

Intended purpose:
Software for diagnostic decision support in an outpatient and inpatient medical environment

Scope:
Design and development, distribution, installation and maintenance of software as a medical device and for medical devices
